Silicon Surgeon	Version <1.0>
Main Company Website	Date : 12/9/2016

Introduction

Purpose

The purpose of this document is to describe the requirement specification for the web site “Silicon Surgeon”.

The intended audience for this document is client and developers.

First it is the contract between you and the client. Second it is for the developer of the site. Two primary goals are:

- 1. Client gets a very good understanding of what you will be delivering.*
- 2. Developer has a very good understanding of what they are going to create.*

Definitions, acronyms, and abbreviations

W3 Validation – refers to both Html and CSS validation tool provided by the W3c.org. the html validator is located at:

<http://validator.w3.org/>

with the CSS validator located at:

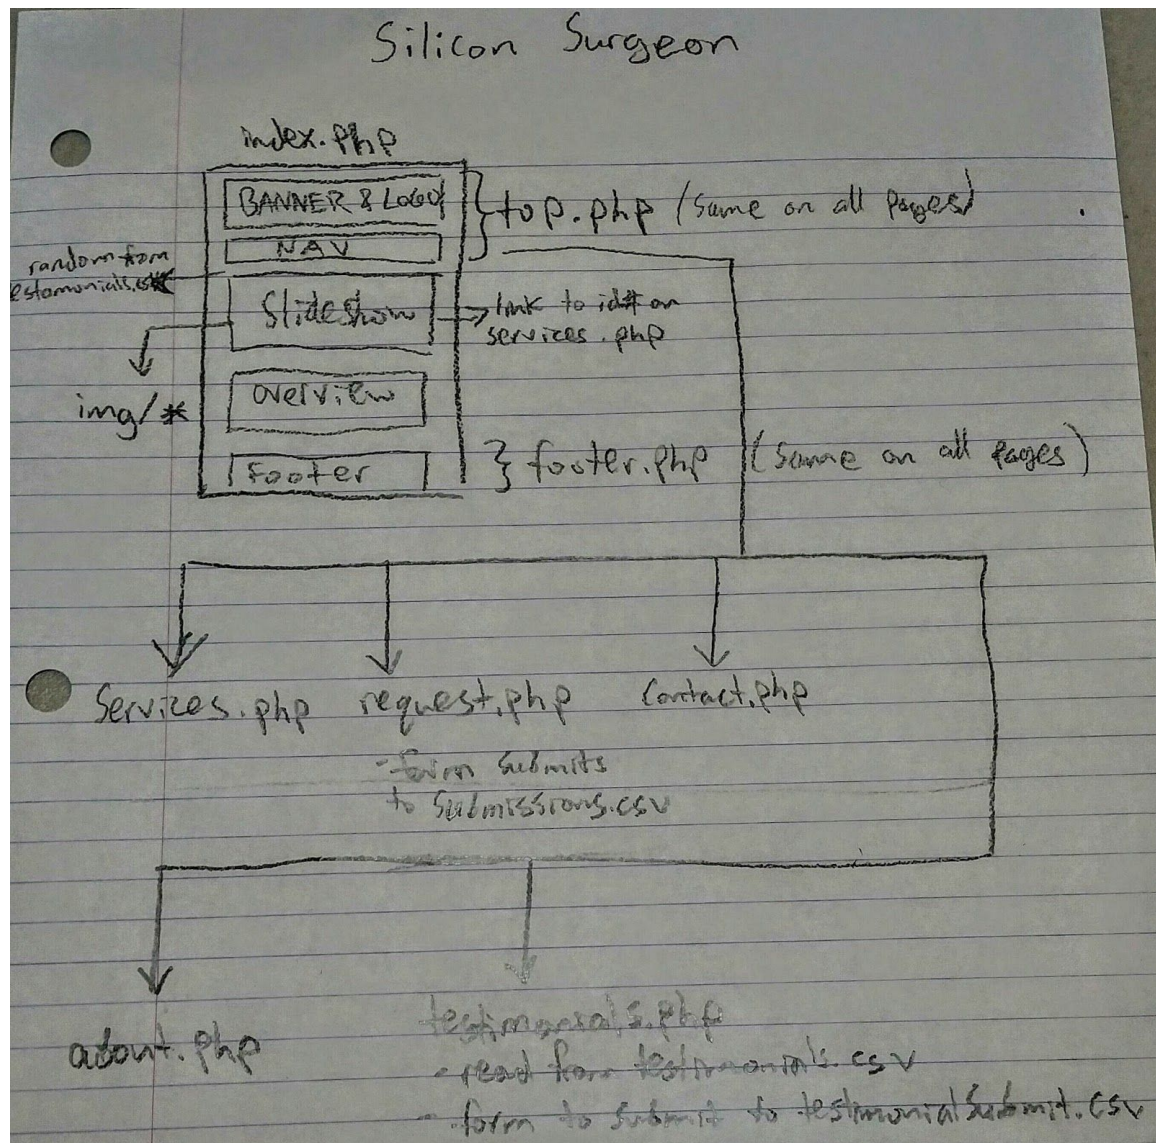

<http://jigsaw.w3.org/css-validator/>

Overall Description

This is the business website for the company “Silicon Surgeon”. It provides an overview of the company, its services and employees, and everything else a customer would need to know. There is also a form for easily submitting requests to make appointments.

Silicon Surgeon	Version <1.0>
Main Company Website	Date : 12/9/2016

Storyboard

Silicon Surgeon	Version <1.0>
Main Company Website	Date : 12/9/2016

Specific requirements

1. Title for main page: Silicon Surgeon
2. Meta Description:
3. Meta Charset: UTF-8

4. Logo:
5. Main page photos:

(make into slideshow to really catch the eye!)

Silicon Surgeon	Version <1.0>
Main Company Website	Date : 12/9/2016

6. Index outline: The first thing that should immediately catch the user's attention should be the css-slideshow. Immediately on top of the slideshow and under the nav should be a randomly selected quote from testimonials.csv (without the name). Under the slideshow should be the tagline (Personal * Home * Business), followed by a brief overview of the company.

7. Services outline: Mobile device diagnostics, Computer repair, and Network Setup (corresponds to one of the 3 slideshow images, which should link to their section in services.php)

8. Request outline: 1 checkbox asking if first customer or not, text input asking for name, 3 radio buttons asking for title (mr, mrs, or not applicable in more complex situations), text input for email, text input for phone number, 2 checkboxes asking for preferred contact method (phone/email), drop list asking for request subject, and textarea for additional messages.

9. Request form guidelines: all input should be sanitized for htmlentities and validated for 1. existence if it is a required element or 2. proper input (email and phone numbers should be checked for this). The form should list the errors in order on the top of the form and successful forms should be emailed to client. Each form is required to have a unique ticket id# generated.

10. Contact outline: should have opening hours, contact methods (phone, email, fax, and physical address), and an embedded google maps iframe to show location.

11. About outline: a page with a picture and description of each staff member.

12. Testimonials Outline: this page loads name and review pairs from a csv file and lists them out from top to bottom. There is a second form on this page to allow users to submit their own review to a separate csv file to await private review.

13. Metastructure: Header contains Title and logo, with phone number in top right corner. Nav contains buttons to all site pages. Main body contains all the important content. Footer should be sticky by default. All of this should be in line with each other, centered and making up 80% of the overall page width.
